VINAYAKA N WALISHETTAR

Full-Stack Developer | Application Security | Founder, Kavalu Labs
Hubballi, Karnataka, India | +91 9108697376 | vinayakanw@gmail.com
LinkedIn | GitHub | Portfolio | Kavalu Labs

KEY HIGHLIGHTS

- Shipped 6+ projects for clients across web, mobile, AI and security, using React, Flutter, FastAPI and Node.js.
- Delivered 7+ vulnerability audit reports through Kavalu Labs, covering web and API penetration testing and configuration review.
- Built Kavalu Security Engine , an automated six-module web vulnerability scanner covering injection, TLS and exposed-secrets checks.
- Finalist of Smart India Hackathon 2024 (National) and placed at three more hackathons across Karnataka.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL
Frameworks & Technologies: React.js, Tailwind CSS, FastAPI, Flutter, Node.js, Express.js, REST APIs, JWT
Databases & Cloud: MySQL, MongoDB, PostgreSQL (Supabase), Firebase, AWS (EC2, S3, EKS)
AI & Core CS: Generative AI, LLM Integration, RAG, OCR, NLP, Data Structures and Algorithms, DBMS
Tools & Platforms: Git, Docker, Cloudflare, Linux
Security: Web and API Penetration Testing, Vulnerability Assessment, OWASP Top 10, Burp Suite, OWASP ZAP, Nmap, Wireshark

EXPERIENCE

Founder and Application Security Developer | kavalu-labs.nayaka100.in **Aug 2026 – Present**
- Launched a security practice offering web and API penetration testing, vulnerability assessments & security and configuration reviews.
- Operate on written scope and explicit authorization, so every test is sanctioned and every finding is backed by evidence.

Software Development Intern | Nantech Solutions **Sep 2026 – Present**
- Work on vnbill and a range of client software, including accounting and other applications, writing code to production standards.
- Diagnose production bugs and ship maintainable fixes, learning how software behaves under live conditions.
- Shape features around scalable architecture and a user-friendly experience, turning client feedback into engineering decisions.

PROJECTS

Kavalu Security Engine: Automated Web Vulnerability Scanner | kavalu-security-engine.nayaka100.in *Selenium, Burp Suite*
- Engineered a six-module scanner spanning attack-surface discovery, injection testing, TLS auditing and headless-browser checks.
- Pairs secrets and misconfiguration detection with Burp Suite proxy interception for manual request inspection.
- Detects SQL injection, XSS (including DOM-based), command injection, path traversal, and insecure cookie and CORS settings.
- Flags exposed .env and .git files, then produces evidence-backed reports with clear remediation steps for developers.

Raksha-Vyuh: Phishing Detection Platform | raksha-vyuh.nayaka100.in *React, FastAPI, ML, LLM, Firebase*
- Screens messages before they are opened, using an ML model to flag phishing as it happens.
- Employs an LLM to explain each threat in plain language, helping users steer clear of scams and malicious links.
- Bundles a password manager that suggests strong passwords and stores credentials safely and the family safety features.

Mattakshra: Multilingual Voice Intelligence Platform *React, FastAPI, NLP, OCR, Supabase, Cloudflare*
- Created a live voice platform that detects spoken and code-mixed languages straight from the microphone.
- Compiles a closing report of key points, reminders, dates and times for police complaints and patient's enquiry.

Jaanatana: Voice-Enabled Mandi Application | GitHub *Flutter, FastAPI, OCR, NLP, Generative AI*
- Designed a mandi application with live voice input, OCR, NLP and Generative AI-based invoice generation.

Hubballi APMC Truck Logistics Platform | GitHub *Voice-to-Text, Role-Based Dashboards*
- Architected a two-sided platform linking customers with truck owners, so trucks reaching Hubballi APMC never return empty.
- Added voice-to-text for mobile users and a clean, fast interface, with every line of code written by hand.

HACKATHONS AND ACHIEVEMENTS

- **Finalist of Smart India Hackathon 2024 :** Network-based emergency response system for women and senior citizens
- **2nd Runner-Up, LEAP Hackathon 2026 (TiE Bengaluru):** Hubballi APMC Truck Logistics Platform
- **Top 10, Hack2Future 2.0 (IIIT Dharwad):** Mattakshra, a multilingual voice intelligence platform built in a 36-hour hackathon
- **Top 15, Make for Belagavi 2026 (VTU, Belagavi):** Raksha-Vyuh, a phishing detection and personal cybersecurity companion
- **Round 3, Flipkart GRiD 8.0:** Reached Round 3 in the Software Development Track.

EDUCATION

B.Tech, Computer Science and Engineering | Visvesvaraya Technological University (VTU) | **CGPA: 8.2/10** **2023 – 2027 (Expected)**

CERTIFICATIONS

- **Oracle Cloud Infrastructure 2025 Certified Generative AI Professional** | Oracle University **Mar– Sep 2025**
- **Internet Crimes and Cyber Security** | NPTEL, IIT Madras **Feb – Apr 2026**
- **Software Engineering Job Simulation** | J.P. Morgan **Oct 2025**
- **Merit-Based Scholarship, HCL GUVI STaR Program** |HCL GUVI **Mar 2025**
